PROJECT

TASK 6B: INDIVIDUAL REPORT

Course : SECR1213 NETWORK COMMUNICATION

Semester/Session : 1-2024/2025

Section : 02

Lecturer : Prof. Madya Ts. Dr. Ismail Fauzi bin Isnin

Group Name : InNet

Name : Mohamed Alif Fathi Bin Abdul Latif

Matric No : A23CS0112

Task 6C Video Link :

DETAIL OF MY CONTRIBUTION

For task 1, my contribution is I made a dummy sketch of the ground and first plan. Then, we decided to divide the task by each member designing one to two rooms. My part is to design video conferencing rooms and virtual meeting rooms. After design, we compile each room. For task 2, I made questions 2, 4 and 6. For task 3, my part is searching and explaining the wireless access point and modem for a table of devices. Then, I answered question 3 for reflection on my part, which is major differences between the same devices from different brands for modem and wireless access point. For task 4, my contribution is to complete the network diagram section. I designed the network diagram for each floor and compiled it. For task 5, I suggest the subnet mask for every room and each floor. I also make the calculation for every subnet mask and the network address detail which is to find the network address, usable address and the broadcast address for every subnet mask. For task 6, my part is to define the table of figures and copy the part from task 5 to the compiled task. I also took part to complete the team and member responsibilities table and completed the conclusion.

DETAIL OF OTHER MEMBER CONTRIBUTION

For the details of the other members' contribution to the group and project, I make a table below to list all the details of my members contribution.

Team Members	Contribution
AFIF SHAQIR IRFAN	- Task 1: Designed the Hybrid Classroom and General Lab - Task 2: Question 1 and feasibility assessment - Task 3: Research for switch - Task 4: Complete the connection needed and identify cable types and length - Task 5: Give ideas of the subnetting and complete the subnet mask table - Task 6: Complete abstract
IMAN ABADI	- Task 1: Designed the Cisco Networking Lab and the Embedded Lab - Task 2: Question 3,5 and 10 - Task 3: Research for router and connectors - Task 4: Designing the connections of the 1st floor of our plan - Task 5: Give ideas of the subnetting and complete the subnet mask table - Task 6: Complete the financial budget table and copy the task to compile it
MUHAMMAD ADAM	- Task 1: Designed the General Labs and Student Lounge - Task 2: Question 7, 8 and 9

	- Task 3: Research for router and connectors - Task 4: Designing the connections of the ground floor of our plan - Task 5: Give ideas of the subnetting and complete the subnet mask table - Task 6: Complete the introduction and copy the task to compiled it
--	--

HOW I WORK AS A GROUP

How I work as a group is I always give a response and give feedback to any ideas or discussion in the Whatsapp group. I always give some ideas in a group discussion. I also consistently search for some useful materials for groups as it can be referenced to this project. I also always ask my team members I don't understand and discuss it so it don't be a problem for the progress of the task. I always finish my part on time and remind my teammate the task due date so it is not a problem like someone forgetting to do their part.

WHAT I LEARNED FROM WORKING AS A GROUP

What I learned from working in a group is how to work together and use everyone's strengths to complete this project. I understood the importance of clear communication and listening to avoid misunderstandings and potential issues. I learned that time management is important. When things didn't go as planned, such as making a mistake about the project requirements, I learned to adapt and make adjustments in time. Additionally, I improved my problem-solving skills by sharing ideas with others. I also realized how important it is to do my part well for the team.

WHAT I LEARNED FROM DOING THE PROJECT

What I learned from doing the project is there is a lot of software to design floor plans and I learned that planning a floor plan is actually difficult. I learned that we need to do a lot of research to make the project meet the requirements and not make mistakes for the tasks. I also learned the actual function of all network devices. I learned that setting up the network for one block is actually expensive and difficult. From this, I learned to appreciate the network in my faculty. I also gain more knowledge on subnetting the network address at a department.

COMMENT AND SUGGESTION ON THE PROJECT

This project was a great learning experience as I learned many I don't even know in networking. There are some things that can be improved in the project . I need more time to do research for the networking device, network diagram and network subnetting in a department. I also hope to have spent more time checking and improving the final work and doing regular checks as we go could make the final project better.
