1.0 COMPANY/CLIENT BACKGROUND

The Kemubu Agricultural Development Board (KADA) is an institution within the Ministry of Agriculture and Food Security that promotes and encourages the economic and social growth of farmers in the Kemubu region. Within KADA there is an organization called KADA's staff cooperative whose members unite voluntarily to achieve common interests in the economic, social and cultural fields. The cooperative only allows employees that work under KADA to join as a member of the cooperative. The cooperative offers benefits such as loan services for business purposes, emergencies and welfare funds for its members.

2.0 PROBLEM BACKGROUND

Currently, KADA's staff cooperative runs most of its processes manually from applying to become a member of the cooperative, applying for loans, report generation and data storage in a form of a hard copy facilitated by a clerk. An example of a problem from this is that when applying for a loan using an application form is that it is prone to inconsistency in data entries from manual data entries. These inconsistencies can cause significant errors, as data entered manually is prone to human error. It is also inefficient to always fill out repetitive information such as employees' names and ID numbers for applications. Other problems include data management issues, limitations in data collection and analysis and reliance on human resources.

Inconsistency in Data Entry

KADA's data management issues are a significant concern, primarily due to inconsistent data formats and reliance on manual data entry. Manual data entry is prone to human error, and inconsistencies can cause significant errors. It is also inefficient to always fill out repetitive information such as employees' names and ID numbers for applications.

Data Management Issues

KADA uses paperwork as the main medium for membership and loan applications. Large volumes of documents can be hard to handle as they can be misplaced or lost during transfer or storage. Storage for the application forms also raises a problem as physical storage of documents requires space and that can lead to organizational challenges. Documents are also hard to retrieve when they need to be reviewed. It also raises security and privacy issues as sensitive information is involved

Limitations in Data Collection and Analysis

The manual method of collecting data causes it to be uncategorized and unorganized. KADA expresses its difficulty in generating monthly and yearly reports of profits and losses. Insufficient data can affect the corporation's decision-making process for prospects.

Reliance on Human Resources

The manual process heavily relies on large amounts of human resources as the whole membership and loan application process is extensive, making it labor-intensive and contributing to more costs. It also makes it more prone to human errors as various entities handle the entire process. There could be errors when reviewing applications to make sure the information provided is valid and failure to record payment details.

3.0 PROPOSED SOLUTION

The proposed system will be a website as an alternative to the manual system currently used by KADA's cooperative. The system will still retain some functionality but with additional modifications that increase efficiency to enhance the working experience of the entities involved. The main improvement is digitising most of the processes of the current system such as filling in the membership and loan application. However, some system processes are intended to be kept the same, such as the board of directors meeting that the cooperative desires to be done physically. The website will have a database that users of the system can utilize to create, read, update, and delete data in the database. This addresses the data management issues where important data is stored in a safe place with a database.

Firstly, employees of KADA who desire to apply for a membership application to be part of the cooperation. The system requires the employees to register as a member first before they can log into the system. The registration of a member relies on the Board of Directors' approval of whether they want to reject or approve the application, the information will be stored in the database. When filling out the form, the system will have a function that controls data incompatible issues. For example, when filling out a field that requires a certain format. If the user happens to input a value besides what was formatted, the system will alert the user for a valid input instead.

As for the members of the cooperative, when applying for a loan, the system will check if the member has at least RM 300 of share modal before they can apply for the loan. If they do not have the required amount the system will tell the user that they cannot apply for the loan. While filling out the application, they only need to provide information not in the existing member database. The website will calculate the monthly payments based on the loan type chosen and amount requested. The system also allows the applicant to upload files required for the application such as payslips and guarantors signature. The system will provide the same feature to overcome the data management issue for the loan application.

From the viewpoint of the board of directors, they can access the applicant's information from the website. The board of directors can view the list of both membership application and loan application through the website. They can also view the details of specific applicants and download files that the applicant has uploaded beforehand. From there, they can choose to either approve or reject the loan applications.

Lastly, the clerk is in charge of managing the cooperative's database and policies. The clerk is responsible for recording all the payments that are made by members by both salary deductions and upfront payment. The clerk is also responsible in managing the policies of the database such as changing the loan's max amount allowed that is requested, the rate of the loan and the minimum amount of share modal required before applying for the loan.

4.0 DEVELOPMENT APPROACH

The Agile development approach is used for the development of this project. This approach is justified by the dynamic nature of the system, where requirements may change overtime according to the product owner's need as development progresses. Agile's iterative development methodology allows for incremental delivery of each module, facilitating early and continuous user feedback. Given the involvement of various actors, including members, clerks, and board of directors, Agile promotes collaboration and communication within cross-functional teams, ensuring that the final product aligns closely with user expectations. Additionally, Agile's flexibility allows for changes in priorities or new information to be discovered throughout development. The iterative testing inherent in Agile supports the ongoing validation and quality assurance necessary for a system with multiple interacting modules. Overall, Agile's adaptability and emphasis on user participation make it a suitable approach for developing a system that meets the changing needs of its users.

5.0 DEVELOPMENT SOFTWARE, LANGUAGE, TECHNOLOGY, API AND TOOLS

Software

During the development of the Koperasi KADA Berhad System, we incorporated various software tools to optimize efficiency and ensure a smooth workflow throughout the project. Visual Studio Code was utilized as the primary code editor due to its versatility. It provides extensive support for multiple programming and markup languages. To facilitate local development and testing, we employed XAMPP, an open-source, cross-platform web server solution stack. This tool was essential for setting up a local hosting environment, allowing us to run and test the system offline before deployment. With the Apache HTTP server at its core, XAMPP provided a stable and efficient way to manage database interactions, ensuring smooth backend operations and database connectivity through MySQL. Additionally, Google Chrome was extensively used for testing and debugging the system's functionalities.

Language

The Koperasi KADA Berhad System integrates multiple programming languages to ensure its functionalities operate efficiently and seamlessly. These languages include Hypertext Markup Language (HTML), Cascading Style Sheets (CSS), JavaScript, Hypertext Preprocessor (PHP), and Structured Query Language (SQL), each playing a crucial role in the system's architecture. HTML serves as the backbone of the system, providing the fundamental structure for web pages by defining elements such as headings, paragraphs, tables, and input fields. This structural framework is further enhanced by CSS, which is responsible for styling and layout, ensuring a visually appealing and responsive user interface across different screen sizes and devices. JavaScript, a scripting language, is utilized to execute functions triggered by specific events on web pages. PHP, serving as a general-purpose scripting language, establishes a connection between HTML and the database, managed by phpMyAdmin.

Tools

The tool used for designing the Entity Relationship Diagram (ERD) and Use Case Diagram in this project is Lucidchart. Lucidchart is a cloud-based diagramming application specifically designed for creating clear and structured visual representations of system architectures and workflows.

6.0 FUNCTION / MODULE EXPLANATION

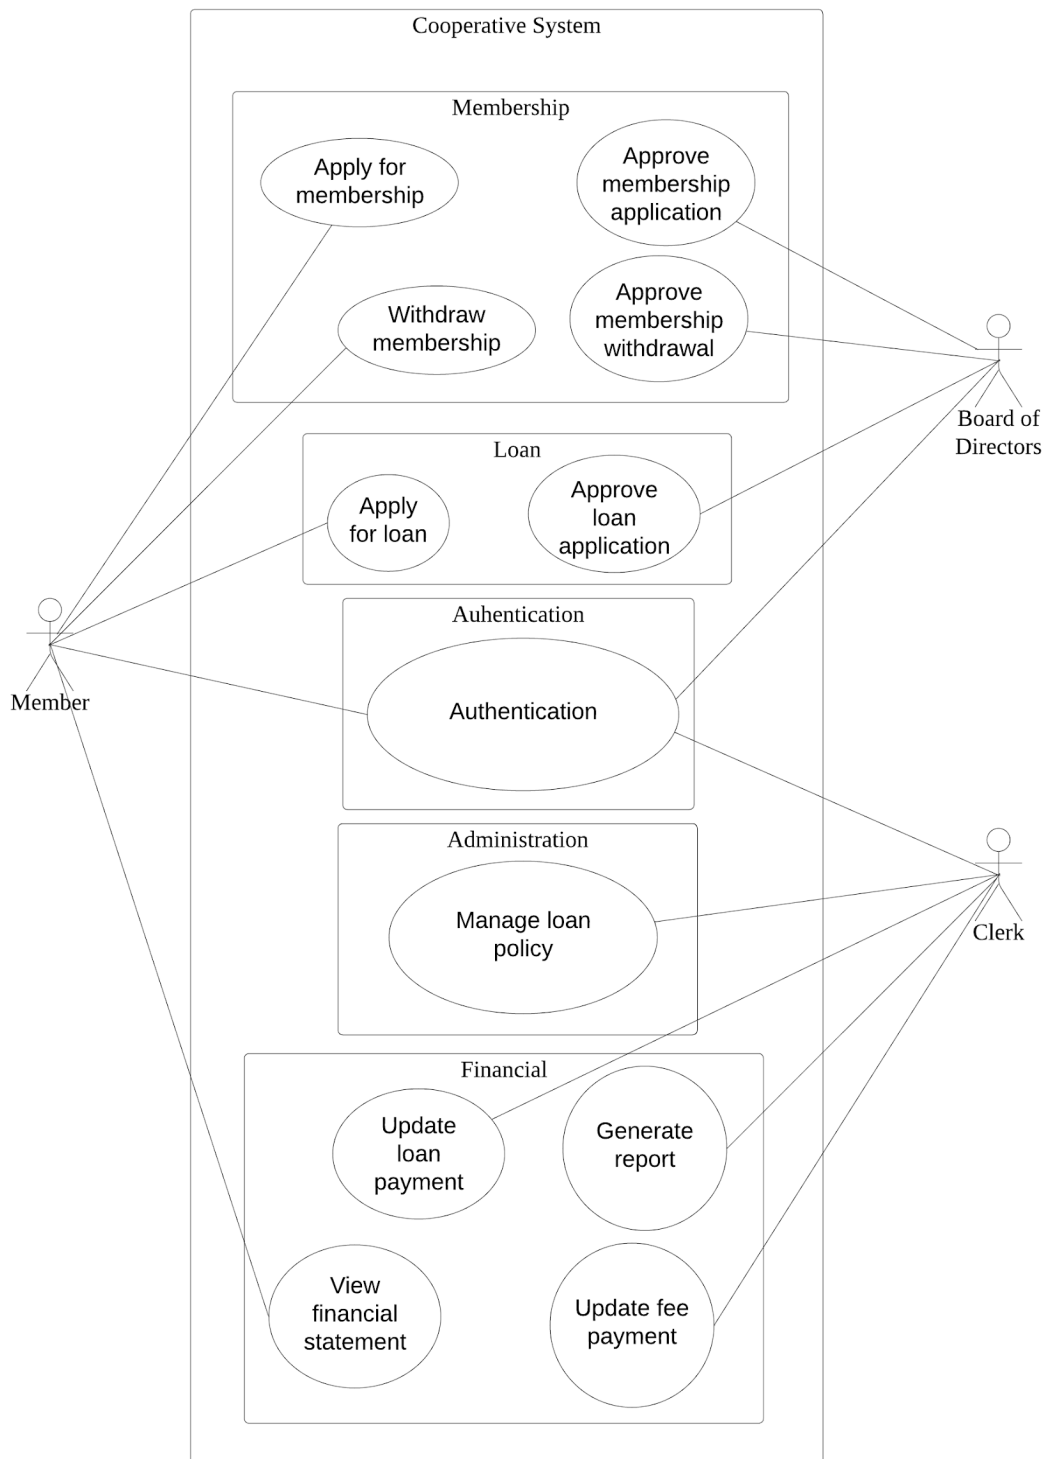

Figure 1: Use Case Diagram for KADA's Cooperative Web-Based System

Table 1: Description of Module and Functions for KADA's Cooperative Web-Based System

Use case	Function	Description
US001	Apply for Membership	This use case allows the member to be able to apply for membership.
US002	Apply for Loan	This use case allows members to be able to apply for a loan.
US003	Withdraw Membership	This use case allows member to withdraw their position as a member
US004	Approve Membership Withdrawal	This use case allows the board of directors to approve or reject member withdrawal applications.
US005	View Financial Statement	This use case allows members to view their financial statements such as loan payment statements and their cooperative shares.
US006	Update Loan Payment	This use case allows clerk to update loan payment for each members
US007	Update Fee Payment	This use case allows clerk to update fee payment for each members
US008	Approve Membership Application	This use case allows board of director to approve or reject the membership application
US009	Approve Loan Application	This use case allows the board of directors to approve or reject the loan application
US010	Manage Loan Policies	This use case allows the clerk to generate reports so that the statistical report of the cooperative can be summarised.
US011	Generate Report	This use case allows the clerk to generate reports like number of membership, number of loan applications and details and number of member's withdrawal for monthly or yearly
US012	Authentication	This use case allows the web system to distinguish the user type based on their Identification number

6.1 Module Apply for Membership

ALIF FATHI and AFIQ DANIAL were in charge of this module.

Module Description

- This module allows the employee of KADA to register membership.
- There are two choices for applying for membership which are the new member or the member that is already quitting the membership but wants to reapply it.
- If the member is new, they need to fill in their personal details, company details, family details and the fee payment needed that is later paid by salary deduction or upfront payment.
- The fee payment needed to fill in is only modal fee and other payments like modal share, modal, entry fee, deposit, charity fund and savings have fixed value with RM 50, RM 50, RM20, RM5, RM 5 respectively.
- The member then ticks the declaration and proceeds to submit the form.
- If the member is already quitting the membership but wants to reapply, the system will prompt the member to check their staff ID if it is already in the database and form will automatically fill in but only password, position, position grade and modal fee need to be refilled.
- The entry fee for the members is increased to RM100 instead of RM50 for the members who reapply for membership.
- If the membership application status is pending or already approved, The member cannot submit the form.

6.2 Module Apply for Loan

ALIF FATHI was in charge of this module.

Module Description

- This module allows the members to apply for a loan service provided by the cooperative.
- To apply for a loan, the members need to have a minimum share model of a certain amount based on the current policy.
- The member has to pick the loan type they wish to apply for.
- Then, they will have to input the amount of loan they want to ask for.
- The amount requested has to be within the maximum and minimum range of the loan amount required based on the set loan policy.
- The monthly payment will be calculated and displayed to the member.
- The member will then have to fill in the guarantor details where they would need to submit some document in a pdf file for the board of directors approval process.

6.3 Module Withdraw Membership

AFIQ DANIAL were in charge of this module.

Module Description

- This module allows members to withdraw from being a member in the cooperative.
- The members will have to fill in the reasons why they want and submit it.

6.4 Module Approve Membership Withdrawal

AFIQ DANIAL were in charge of this module.

Module Description

- The system will show the list of the membership withdrawal application to the Board of Director.
- The board of directors can check their membership withdrawal application details and choose to approve or reject the application.
- After the approval, an email will be sent to the applicant to notify them about the approval.
- If the member withdrawal is approved, the member credential will be deleted from the system making the member unable to login back to the system.
- The member details were not deleted but only the member status changed to inactive.

6.5 Module View Financial Statement

IMAN ABADI was in charge of this module.

Module Description

- The members access the dashboard to see the financial details like loan details and fee details for them.
- The members can click the “Cetak Penyata Button” to view their financial statement.
- The system will then generate the financial statement in a PDF file and the members can print it or download it.

6.6 Module Update Loan Payment

IMAN ABADI was in charge of this module.

Module Description

- This module allows clerks to update the loan payment of members who applied for loans
- The system will show the list of members that have at least one active loan. The system will also show how many active loans a member currently has.
- The clerk can choose any one of the members they wish to update and then which loan belongs to the member they want to update.
- The clerk will choose the month of the payment and then the payment method that the members made.
- The clerk can check the amount of loan after the update using the value of monthly payment calculated when the member applied for the loan.
- The clerks can add remarks to the payment if there are any details that they wish to add.
- The loan payment will be used to deduct loan balance.
- If the loan balance reaches 0, the loan will be considered done and the status of the loan application will change to completed.

6.7 Module Update Fee Payment

IMAN ABADI was in charge of this module.

Module Description

- This module allows clerks to update the shares of the members based on the amount that was agreed on during the membership application.
- The system will show the list of members in the cooperative displaying their member id and share amounts.
- The clerk can choose any one of the members they wish to update.
- The clerk will choose the month of the payment and then the payment method that the members made.
- There are two types of payment methods which are through salary deduction and upfront payment.
- Then the clerk can input the entry fee if the member is a new member or a member that has withdrawn from the cooperative but decided to join back in.
- The clerks can add remarks to the payment if there are any details that they wish to add.

6.8 Module Approve Membership Application

AFIQ DANIAL was in charge of this module.

Module Description

- The system will show the list of the membership application to the Board of Director.
- The board of directors can check their membership application details like the members personal details and family details and then choose to approve or reject the application.
- After the approval, an email will be sent to the applicant to notify them about the approval.

6.9 Module Approve Loan Application

ALIF FATHI was in charge of this module.

Module Description

- The system will show the list of the loan application to the Board of Director.
- The board of directors can check their loan application details like members details and guarantors details and choose to approve or reject the application.
- After the approval, an email will be sent to the applicant to notify them about the approval.

6.10 Module Manage Loan Policies

AFIF SHAQIR IRFAN was in charge of this module.

Module Description

- This module allows the clerks to modify loan policy such as loan rate and maximum loan

amount.

- The clerks have to choose which loan that they want to modify.
- Then they have to input their desired changes in the form which are loan rate, maximum loan amount, minimum loan amount and minimum modal share required for a member to apply for loans.
- The values will be updated and shown in a table.

6.11 Module Generate Report

IMAN ABADI was in charge of this module.

Module Description

- The system prompts clerks to input the type of the report which is monthly or yearly.
- The clerk chooses the type of the report that shall be generated in a PDF file.
- The system will generate reports about total members and membership, overall loan details and fee payment details.
- The clerk can print it or download it in PDF file format.

6.12 Module Authentication

IMAN ABADI was in charge of this module.

Module Description

- The system shall provide a login interface accessible for members, clerks and board of directors.
- The users shall enter their staff number and password for authentication.
- The system shall verify the user type based on the credentials provided with the data in the database.
- If the user exists and the credentials are valid, they shall allow access to users to their respective dashboards.

7.0 SYSTEM CREDENTIALS (HOSTING)

Hosting: Hostinger

Website Address: <https://kadakoperasi.fun/>

1) Member

- User ID : 100
- Password : 123

2) Clerk

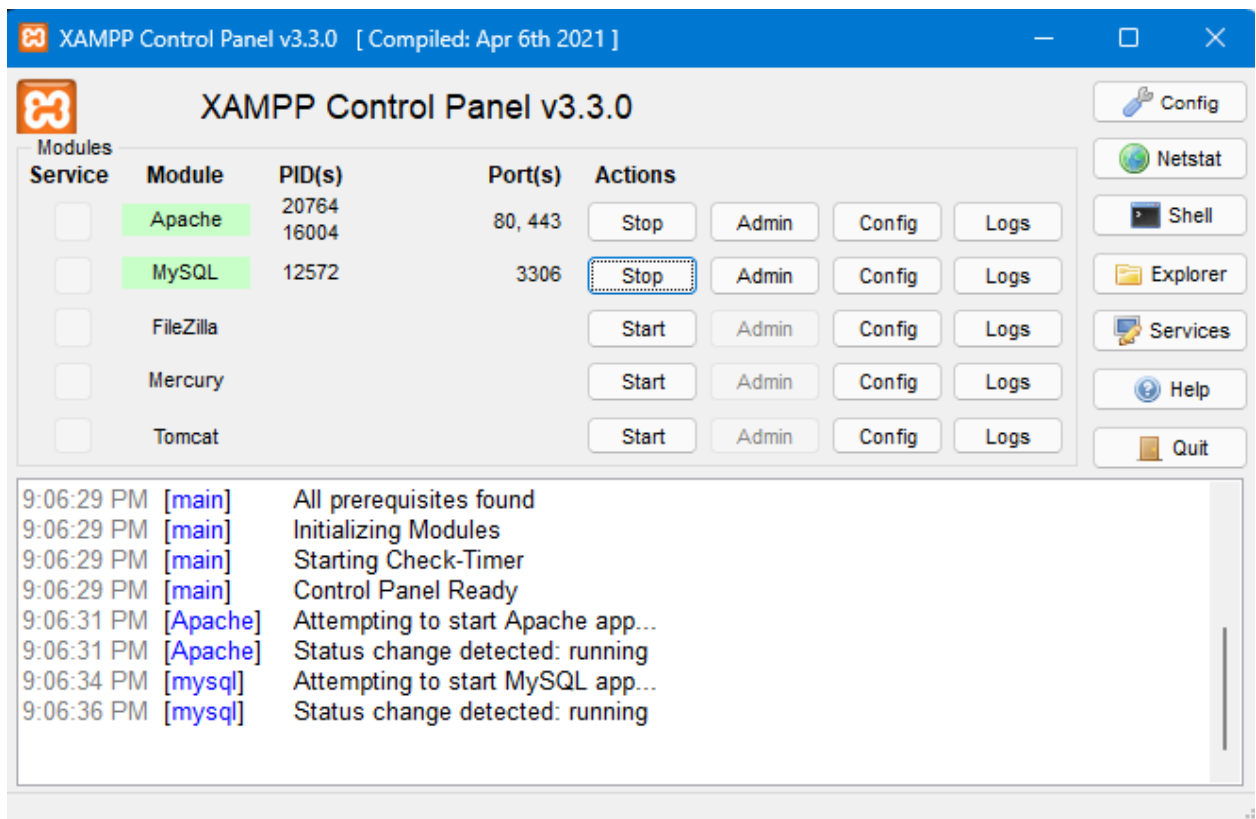

- User ID : 200
- Password : admin123

3) Board of Directors

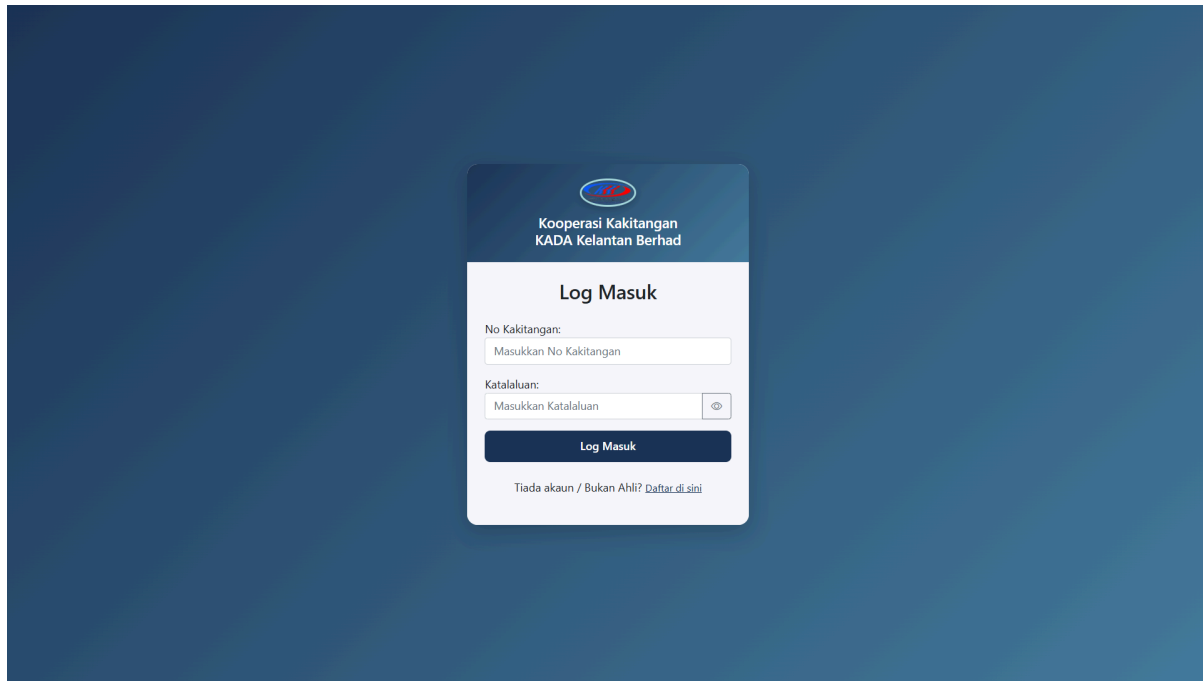

- User ID : 300
- Password : admin123

8.0 LOCALHOST SETUP

1. Download and set up the XAMPP Control Panel from [Apache Friends](#).
2. Launch Apache and MySQL.
3. Open phpMyAdmin by clicking the 'Admin' button in the 'Actions' section of the MySQL module.
4. Extract the 'KADA.zip' file into Local Disk (C:) > xampp > htdocs file path.
5. Create a new database named 'db_kada' in MySQL.
6. Import 'db_kada' from the folder 'KADA' to the database 'db_kada'

9.0 SYSTEM INTERFACE FOR ALL USERS

The screenshot displays a login form for KADA Kelantan Berhad. The form is centered on a dark blue gradient background. At the top of the form, there is a logo and the text "Kooperasi Kakitangan KADA Kelantan Berhad". Below this, the title "Log Masuk" is prominently displayed. The form contains two input fields: "No Kakitangan:" with a placeholder "Masukkan No Kakitangan" and "Katalaluan:" with a placeholder "Masukkan Katalaluan" and a toggle icon. A dark blue "Log Masuk" button is positioned below the input fields. At the bottom of the form, there is a link: "Tiada akaun / Bukan Ahli? [Daftar di sini](#)".
