

INDUSTRIAL TALK BY PPG

The technologies and issues discussed in the talk

Key Technologies Discussed

1. SAP Enterprise System

SAP was highlighted as the backbone of PPG's global business processes. The speaker shared the company's journey with various SAP versions, including:

- SAP R/3
- SAP ECC 6.0
- SAP S/4HANA
- SAP BW (Business Warehouse)
- SAP BI (Business Intelligence)

These systems support core business activities such as finance, procurement, stock management, and production planning. The talk emphasized how SAP enables global integration and consistent operations across PPG's worldwide facilities.

Issues & Challenges Highlighted

1. Enterprise System Implementation

Introducing enterprise systems into a real industrial environment is complex. The speaker explained that:

- Business processes must be analyzed, redesigned, and aligned with SAP modules.
- System implementation requires significant planning and coordination.
- Change management is essential to ensure success.

Summary of the talk

In the talk, the speaker introduced PPG, a global company that makes paints, coatings, and special materials. They explained PPG's background, the industries they support, and their mission to "protect and beautify the world." PPG works with many sectors such as automotive, construction, and aerospace.

The speaker also talked about how PPG runs their business using an enterprise system called SAP. SAP helps the company connect different departments like finance, production, supply chain, and HR into one system. This makes work faster, reduces mistakes, and allows the company to use real-time data. PPG chose SAP because it is reliable, suitable for large companies, and can support their global operations.

The talk also included information about why students should join PPG. They shared statistics from the MYTC internship program, showing how many students joined, how many were accepted, and how many continued working with PPG after the program. The speaker encouraged students to apply because PPG provides good training and many chances to learn and grow.

Damiya

The PPG industrial talk gave me a clearer understanding of how essential enterprise systems and modern technologies are in supporting large-scale business operations. I was particularly impressed by how PPG has continuously upgraded its SAP systems over the years and how this reflects the company's commitment to efficiency and digital transformation. The discussion about cloud migration, AI, and IoT also made me realize how quickly the industry is evolving and how important it is for future graduates to be adaptable and tech-savvy. Overall, the session helped me appreciate the complexity behind implementing these systems and encouraged me to develop skills that align with current industry needs.

Reflection

Alif Fathi

The industry talk by PPG is very useful for me because it helped me understand how a big company works and why systems like SAP are important for managing different departments. I also found the MYTC internship statistics very encouraging, as they showed that PPG gives real opportunities for students and even offers full-time positions to interns who perform well. Overall, the talk motivated me to learn more about technology in enterprise systems, improve my current skills, and consider joining a company like PPG in the future.
