Lab Assignment 1: Daily Activities Recorder App

LECTURER: DR AHMAD NAJMI BIN AMERHAIDER NUAR

Name: MOHAMED ALIF FATHI BIN ABDUL LATIF  
No Matric: A23CS0112

Submission Date: 16 April 2026

## 1. Objective

The main objective of this assignment is to apply basic Flutter development concepts learned in Lessons 1 until 3. This project includes making a simple Flutter application that can record daily activities. The app should allow users to enter activity information and display the recorded activities on the screen. This project will practice setting up a Flutter project structure, learning widgets and layout, managing application state with `setState()`, handling user input using `TextField` and displaying all the activities data in the list.

## 2. Brief Description of the System

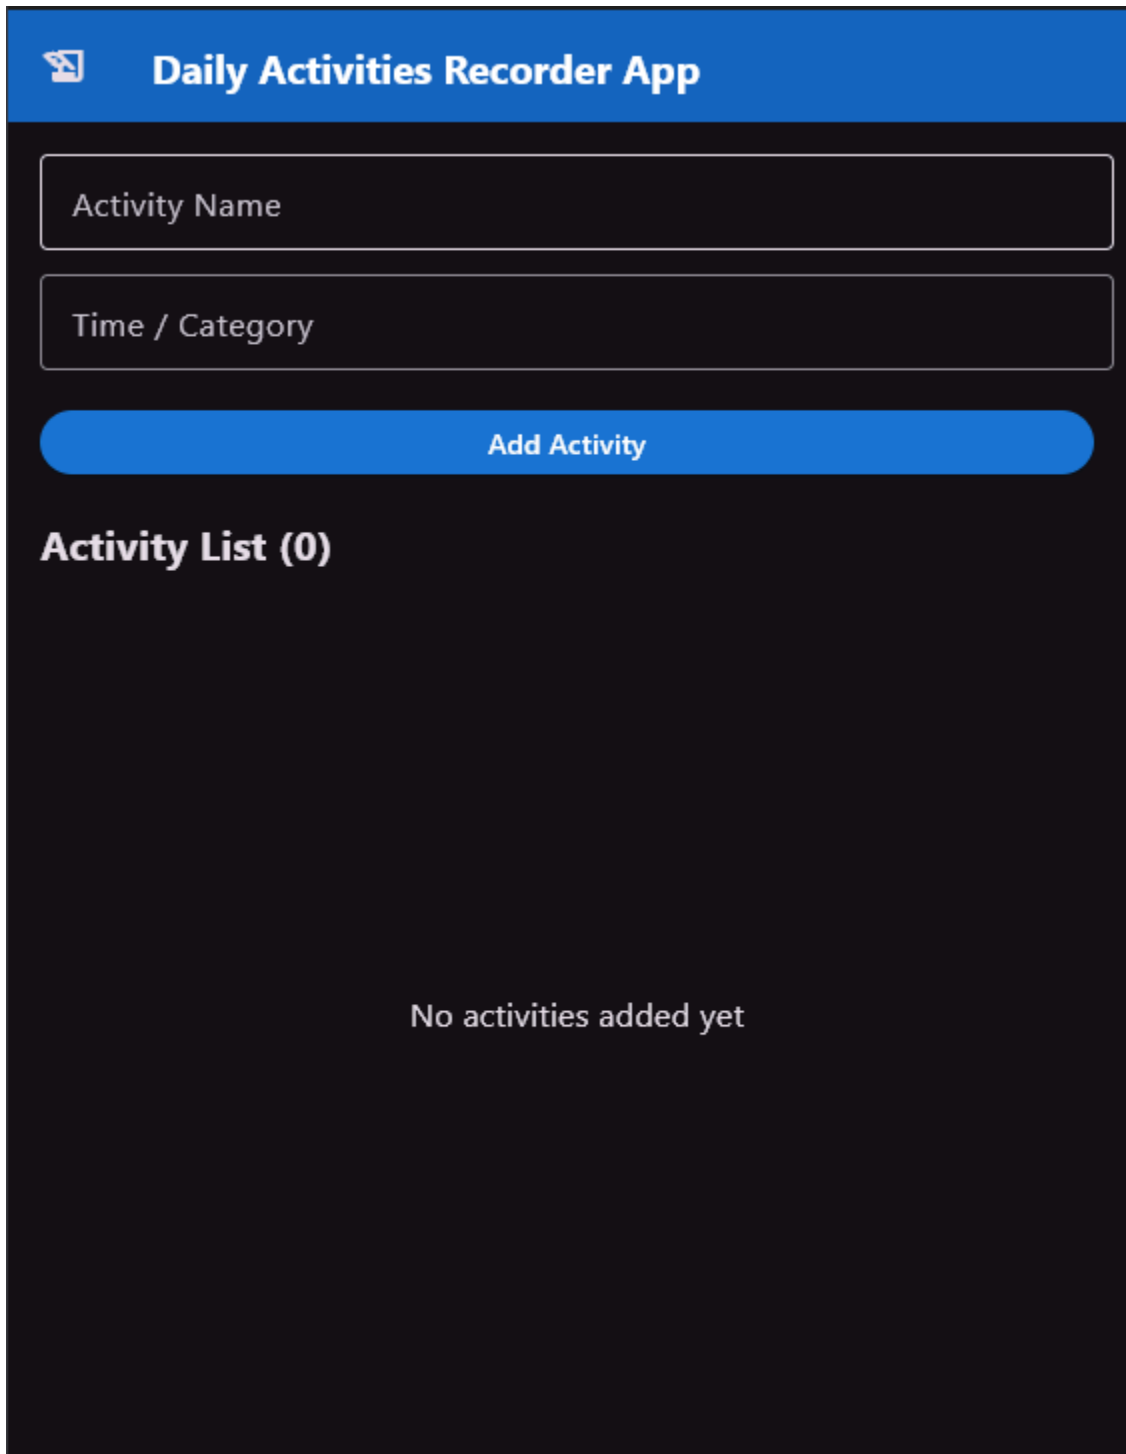

The Daily Activities Recorder App is a mobile application designed to help users store and organize their daily activities. The system allows users to input activity names along with its time or category and save the activities. The recorded activities also should be displayed in list form and have a delete button for deleting the record.

## 3. Explanation of the Interface

The interface follows a clean, modern dark-themed design with the following key components:

- **Activity Name Input Field:** A `TextField` where users enter the description of their activity.
- **Time / Category Input Field:** A second `TextField` used to specify when the activity occurs or what group it belongs to.
- **Add Activity Button:** An `ElevatedButton` that triggers `setState()` to add the new activity to the list.
- **Activity List:** A scrollable `ListView.builder` that displays each activity in a Card format. If the list is empty, it displays a "No activities added yet" message.
- **Delete Button:** A red icon button on each activity card that allows the user to remove specific activities from their record.

#### 4. Screenshots of the App

The screenshot displays the 'Daily Activities Recorder App' interface. At the top, a blue header bar contains a white icon of a notepad and pencil, followed by the app's title 'Daily Activities Recorder App' in white text. Below the header, there are two input fields: the first is labeled 'Activity Name' and the second is labeled 'Time / Category'. A prominent blue button with the text 'Add Activity' is positioned below these fields. Underneath the button, the text 'Activity List (0)' is displayed. The main content area is dark blue and contains the message 'No activities added yet' in a light gray font, indicating that no data has been entered into the app yet.

## **5. Conclusion**

The development of this application successfully met all the requirements stated in the lab guidelines. By implementing `StatefulWidget` and `setState()`, the app achieves a responsive app where user input directly triggers a rebuild of the list. This project strengthened my understanding of widget composition, state management and overall basic Flutter components.
